

EXPERIMENTAL & TRANSLATIONAL STROKE MEDICINE

www.etsmjournals.com

Editor-in-Chief: Wolf-Rüdiger Schäbitz (Germany)

***Experimental & Translational Stroke Medicine (ETSM)* is an open access, peer-reviewed, on-line journal dedicated to presenting original research and review articles on any topic that relates to identifying and solving problems in translational stroke research.**

The journal aims to help improve the quality of experimental stroke research in order to increase the rate of successful translation of novel treatment strategies into clinical practice.

Basic stroke research creates and explores in vitro and in vivo models with the objective of gaining novel insights into the pathophysiological processes occurring during ischemic brain damage with subsequent application to innovative treatment strategies.

ETSM invites content related to: experimental stroke models and their methodological limitations; preclinical treatment trials; improved diagnostic methods that could be translated to human stroke; the pathophysiology of stroke and work on the benefits and limitations of experimental disease models in the field of neurology, when applicable to stroke.

The journal considers the following article types: research articles, reviews and short reports. For further details, see www.etsmjournals.com/info/about/.

Reasons for publishing in *ETSM*:

- All articles published in the journal are open access; universally accessible online without charge.
- High visibility for your work - anyone with Internet access can read your article, free of charge.
- Articles are published immediately upon acceptance.
- Authors retain the copyright of their articles.
- Electronic submission and peer-review makes the whole process of publishing your article simple and efficient.
- Publishing online means unlimited space for figures, extensive datasets and video footage.
- Professional formatting meets the standards expected by researchers.
